Spark – How to Sort DataFrame column explained

In Spark, you can use either `sort()` or `orderBy()` function of `DataFrame/Dataset` to sort by ascending or descending order based on single or multiple columns, you can also do sorting using [Spark SQL sorting functions](#) (https://sparkbyexamples.com/spark-spark-sql-sort-functions/), In this article, I will explain all these different ways using Scala examples.

- [Descending order](#)
- [SQL Sort functions](#)

Before we start, first let's create a DataFrame.

```
import spark.implicits._

val simpleData = Seq(("James",
  ("Michael", "Sales", "NY", 8600),
  ("Robert", "Sales", "CA", 8100),
  ("Maria", "Finance", "CA", 9000),
  ("Raman", "Finance", "CA", 9900),
  ("Scott", "Finance", "NY", 8300),
  ("Jen", "Finance", "NY", 7900),
  ("Jeff", "Marketing", "CA", 8000),
  ("Kumar", "Marketing", "NY", 9000)
))

val df = simpleData.toDF("employee_name", "department", "state", "salary", "age", "bonus")
df.show()
```

This Yields below output.

```
root
|-- employee_name: string (nullable = true)
|-- department: string (nullable = true)
|-- state: string (nullable = true)
|-- salary: integer (nullable = true)
|-- age: integer (nullable = false)
|-- bonus: integer (nullable = true)

Spark SQL – Data Types
(<https://sparkbyexamples.com/spark/spark-sql-dataframe-data-types/>).

Spark DataFrame/Dataset class provides sort() function to sort on one or more columns. By default, it sorts by ascending order.

Syntax

```
sort(sortCol : scala.Predef.Str
sort(sortExprs : org.apache.spa
```

Example

```
df.sort("department","state").s
df.sort(col("department"),col("
```

The above two examples return the same below output, the first one takes the DataFrame column name as a string and the next takes columns in Column type. This table sorted by the first department column and then the state column.

employee_name	department	state
Maria	Finance	CA
Raman	Finance	CA
Jen	Finance	NY
Scott	Finance	NY
Jeff	Marketing	CA
Kumar	Marketing	NY
Robert	Sales	CA
James	Sales	NY
Michael	Sales	NY

DataFrame sorting using orderBy() function

Alternatively, Spark DataFrame/Dataset class also provides `orderBy()` function to sort on one or more columns. By default, it also orders by ascending.

Syntax

```
orderBy(sortCol : scala.Predef.OOrderable)
orderBy(sortExprs : org.apache.spark.sql.Column*)
```

Example

```
df.orderBy("department", "state")
df.orderBy(col("department"), col("state"))
```

This returns the same output as the previous section.

Sort by Ascending (ASC)

If you wanted to specify the ascending order/sort explicitly on DataFrame, you can use the `asc` (<https://sparkbyexamples.com/spark/spark-sql-sort-functions/#asc>) method of the Column function. for example

```
df.sort(col("department").asc, col("state").asc)
df.orderBy(col("department").asc, col("state").asc)
```

[Spark SQL Sort Functions](#)
(<https://sparkbyexamples.com/spark/spark-sql-sort-functions/>).

[Spark SQL Aggregate Functions](#)
(<https://sparkbyexamples.com/>).

The above two examples return the same output.

```
+-----+-----+-----+
|employee_name|department|state|
+-----+-----+-----+
|Maria        |Finance   |CA   |
|Raman        |Finance   |CA   |
|Jen          |Finance   |NY   |
|Scott        |Finance   |NY   |
|Jeff         |Marketing |CA   |
|Kumar        |Marketing |NY   |
|Robert       |Sales     |CA   |
|James        |Sales     |NY   |
|Michael      |Sales     |NY   |
+-----+-----+-----+
```

Sort by Descending (DESC)

If you wanted to specify the sorting by descending order on DataFrame, you can use the `desc` (<https://sparkbyexamples.com/spark/spark-sql-sort-functions/#desc>) method of the Column function. for example

```
df.sort(col("department").asc, col("state").desc)
df.orderBy(col("department").asc, col("state").desc)
```

This yields the below output.

```
+-----+-----+-----+
|employee_name|department|state|
+-----+-----+-----+
|Scott        |Finance   |NY   |
|Jen          |Finance   |NY   |
|Raman        |Finance   |CA   |
|Maria        |Finance   |CA   |
|Kumar        |Marketing |NY   |
|Jeff         |Marketing |CA   |
|James        |Sales     |NY   |
|Michael      |Sales     |NY   |
|Robert       |Sales     |CA   |
+-----+-----+-----+
```

Using Sorting functions

Spark SQL function provides several sorting functions, below are some examples of how to use [asc](#) ([https://sparkbyexamples.com/spark/spark-sql-sort-functions/#asc](#)) and [desc](#) ([https://sparkbyexamples.com/spark/spark-sql-sort-functions/#desc](#)) functions.

Besides these Spark also provides [asc_nulls_first](#) ([https://sparkbyexamples.com/spark/spark-sql-sort-functions/#asc-nulls-first](#)) and [asc_nulls_last](#) ([https://sparkbyexamples.com/spark/spark-sql-sort-functions/#asc-nulls-last](#)) functions and equivalent for descending.

```
df.select($"employee_name", asc(
```

Using Sorting on SQL

```
df.createOrReplaceTempView("EMP")
spark.sql(" select employee_name
```

The above two examples return the same output as above.

Conclusion

As you have learned how to Sort Spark DataFrame columns using sort(), orderBy() and using SQL sort functions. I used this function with Spark SQL along with Ascending and Descending sorting orders.
