PySpark – Difference between two dates (days, months, years)

Using PySpark SQL functions `datediff()`, `months_between()` you can calculate the difference between two dates in days, months, and year, let's see this by using a DataFrame example. You can also use these to calculate age.

datediff() Function

[PySpark – drop\(\) & dropDuplicates\(\)](#)
(<https://sparkbyexamples.com/pyspark/pyspark-distinct-to-drop-duplicates/>)

[PySpark – orderBy\(\) and sort\(\)](#)
(<https://sparkbyexamples.com/pyspark/pyspark-orderby-sort/>)

First Let's see getting the difference between two dates using `datediff()` PySpark function.

```
from pyspark.sql.functions import *
data = [("1", "2019-07-01"), ("2", "2019-06-24")]
df=spark.createDataFrame(data=data, schema=StructType([StructField("id", StringType(), True), StructField("date", StringType(), True)]))

df.select(
    col("date"),
    current_date().alias("current_date"),
    datediff(current_date(), col("date")).alias("datediff")
).show()
```

Output:

```
+-----+-----+-----+
|      date|current_date|datediff|
+-----+-----+-----+
|2019-07-01|  2021-02-26|      606|
|2019-06-24|  2021-02-26|      613|
|2019-08-24|  2021-02-26|      552|
+-----+-----+-----+
```

months_between() Function

Now, Let's see how to get month and year differences between two dates using `months_between()` function.

```
from pyspark.sql.functions import *
df.withColumn("datesDiff", datediff(current_date(), col("date")))
   .withColumn("montsDiff", months_between(current_date(), col("date")))
   .withColumn("montsDiff_round", round(lit(montsDiff)))
   .withColumn("yearsDiff", months_between(current_date(), col("date"))/12)
   .withColumn("yearsDiff_round", round(lit(yearsDiff)))
   .show()
```

Yields below output. Note that here we use `round()` function and `lit()` functions on top of `months_between()` to get the year between two dates.

[PySpark – pivot\(\) \(Row to Column\)](#)
(<https://sparkbyexamples.com/pyspark/pyspark-pivot-and-unpivot-dataframe/>)

[PySpark – partitionBy\(\)](#)
(<https://sparkbyexamples.com/pyspark/pyspark-partitionby-example/>)

[PySpark – ArrayType Column \(Array\)](#)
(<https://sparkbyexamples.com/pyspark/pyspark-arraytype-column-with-examples/>)

```
+---+-----+-----+-----+
| id|      date|datesDiff|  montsDiff|
+---+-----+-----+-----+
|  1| 2019-07-01|      606| 19.806451|
|  2| 2019-06-24|      613| 20.064516|
|  3| 2019-08-24|      552| 18.064516|
+---+-----+-----+-----+
```

Let's see another example of the difference between two dates when dates are not in PySpark DateType format yyyy-MM-dd . when dates are not in DateType format, all date functions return null. Hence, you need to first convert the input date to Spark DateType using to_date() function.

```
from pyspark.sql.functions import *
data2 = [("1", "07-01-2019"), ("2", "06-24-2019")]
df2=spark.createDataFrame(data=data2, schema=SchemaString("id date"))
df2.select(
    to_date(col("date"), "MM-dd-yyyy"),
    current_date().alias("endDate")
)
```

SQL Example

Let's see how to calculate the difference between two dates in years using PySpark SQL example. similarly you can calculate the days and months between two dates.

```
spark.sql("select round(months_between(to_date('2019-07-01'), to_date('2019-06-24')), 2) as months_diff")
```

[PySpark – Read & Write JSON file](https://sparkbyexamples.com/pyspark/pyspark-read-json-file-into-dataframe/)
(<https://sparkbyexamples.com/pyspark/pyspark-read-json-file-into-dataframe/>).

```
from pyspark.sql import SparkSession

# Create SparkSession
spark = SparkSession.builder \
    .appName('SparkByExamples.com') \
    .getOrCreate()

data = [("1", "2019-07-01"), ("2", "2019-08-01")]

df=spark.createDataFrame(data=data, schema=StructType())

from pyspark.sql.functions import *

df.select(
    col("date"),
    current_date().alias("currentDate"),
    datediff(current_date(), col("date")).alias("daysDiff")
).show()

df.withColumn("datesDiff", datediff(current_date(), col("date"))) \
    .withColumn("montsDiff", months_between(current_date(), col("date"))) \
    .withColumn("montsDiff_round", round(montsDiff)) \
    .withColumn("yearsDiff", months_between(current_date(), col("date"))/12) \
    .withColumn("yearsDiff_round", round(yearsDiff)) \
    .show()

data2 = [("1", "07-01-2019"), ("2", "08-01-2019")]
df2=spark.createDataFrame(data=data2, schema=StructType())
df2.select(
    to_date(col("date"), "MM-dd-yyyy").alias("date"),
    current_date().alias("endDate")
).show()

spark.sql("select round(months_between(current_date(), date), 2) as montsDiff")
```

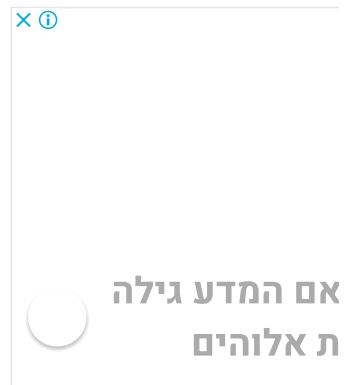

Conclusion:

In this tutorial, you have learned how to calculate days, months, and years between two dates using [PySpark Date and Time Functions](https://sparkbyexamples.com/pyspark/pyspark-sql-date-and-timestamp-functions/) (<https://sparkbyexamples.com/pyspark/pyspark-sql-date-and-timestamp-functions/>). You can find more information about these functions at the [following blog](https://databricks.com/blog/2015/09/16/apache-spark-1-5-dataframe-api-highlights.html) (<https://databricks.com/blog/2015/09/16/apache-spark-1-5-dataframe-api-highlights.html>).

Happy Learning !!
